Prepared By:

LIGHT ELECTRONICS CO., LTD.

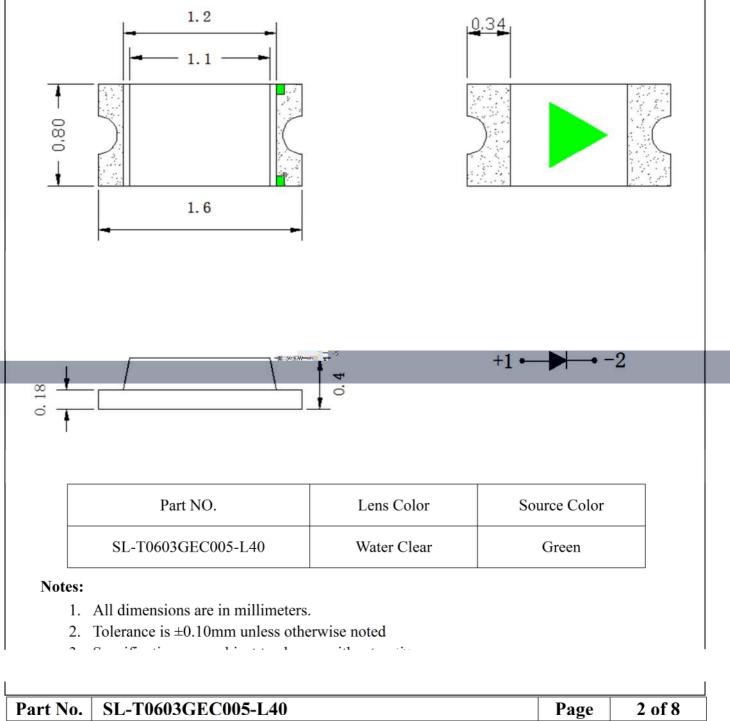

RoHS

Features

- Pb free product—RoHS compliant
- Low power consumption, High efficiency
- Reliable and rugged
- Long life solid state reliability
- Viewing Angle: 120°

Package Dimension

LIGHT ELECTRONICS CO., LTD.

Parameter	MAX.	Unit
Power Dissipation	75	mW
Continuous Forward Current	25	mA
Peak Forward Current ^{*2}	60	mA
Reverse Voltage	5	V

LIGHT

Parameter	Symbol	Min.	Тур.	Max.	Unit	Test Condition
Luminous Intensity	IV	200		400	mcd	I _F =5mA (Note 1)
Viewing Angle	2 1/2		120		Deg.	(Note 2)
Dominant Wavelength	d	520		530	nm	I _F =5mA
Peak Emission Wavelength	р		515		nm	I _F =5mA
Spectral Line Half-Width			30		nm	
Forward Voltage	V _F	2.4		3.2	V	I _F =5mA (Note 4)
Reverse Current	I _R			10	μΑ	V _R =5V

1. Luminous intensity is measured with a light sensor and filter combination that approximates the CIE eye-response curve. Tolerance of Luminous Intensity: ±15%.

2. $_{1/2}$ is the off-axis angle at which the luminous intensity is half the axial luminous intensity.

3. The dominant wavelength, d is derived from the CIE chromaticity diagram and represents the single wavelength which defines the color of the device. Tolerance of Dominant Wavelength: ± 1.0 nm.

4. Tolerance of Forward Voltage: ± 0.1 V.

LIGHT

TIME

- 1. Reflow soldering should not be done more than two times.
- 2. When soldering, do not put stress on the LEDs during heating.

Soldaring iron warman -

- 1. When hand soldering, the temperature of the iron must less than 300° C for 3 seconds.
- 2. The hand solder should be done only once.

Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of LEDs will or will not be damaged by repairing.
